

Rofan

**Forward-looking technology
for airports and industry**

History

Evolving from the Jenbacher Werke Vertriebsgesellschaft founded in 1950, the company distributed products manufactured by Jenbacher Werke AG/Tyrol in Germany until 1980. Parallel to this, the "transport vehicles" product range with all related departments including development, marketing and customer service was developed. Within just a short space of time, Rofan brand vehicles carved out a significant niche on the market.

Today, the Rofan brand is known and valued far beyond Germany's borders for innovative design, quality and stable value. More than 3,200 vehicles have been produced to date. Rofan GmbH currently has 60 employees. Rofan transport vehicles are in use all over Europe as well as in the Far and Middle East. Official Rofan agencies can be found in Greece, Turkey, Italy and Singapore.

Rofan GmbH, with headquarters in Gerlingen near Stuttgart, specializes in the development, production and marketing of transport vehicles for industry and airports. In addition, Rofan offers its customers all related services.

For more than 50 years, the name Rofan has stood for state-of-the-art technology. Rofan transporters and tow tractors are available as diesel, electric and hybrid vehicles – an extensive program of transport vehicles for almost every conceivable application.

Innovative strength, competitive ability, customer satisfaction as well as system and module competence are the key factors contributing to our competitiveness on this market. We as manufacturers see ourselves as a strategic partner to our customers in taking innovative paths to help them strengthen their global competitiveness.

Philosophy/Quality

Our goal

is to satisfy the requirements of our customers. In this, we are aided by 50 years of experience in the development and production of transport vehicles. The technical expertise we have acquired in this time is reflected in the flexibility of our services and the quality of our vehicles. We develop customized transport systems which meet our customers' individual requirements, specifications and conditions of use. A strong market presence, the close practical relevance of our development processes, the orientation towards our customers and the stringent compliance with statutory regulations are the main reasons behind the enduring lead we have established in our field.

Quality

We assure a consistently high quality standard through regular control audits with our customers and suppliers. In this, we not only strive for the highest possible quality of our products and services, but also when it comes to the qualifications of our employees. At Rofan GmbH, we consider people to be the most important guarantor of success. We promote individual responsibility, teamwork and management qualities. Quality, safety, reliability and maximum economic efficiency – all Rofan vehicles are developed and produced according to these criteria. To meet these commitments, Rofan GmbH qualifies new employees in commercial as well as technical fields and over and above this offers all employees an extensive program of further and advanced training measures.

We are optimally prepared for the future. New, innovative products and service models are being developed to meet the requirements of our customers. Additional plants and commercial agencies in Europe and Asia are planned in the long term to secure and further expand our market share.

Like all successful companies, Rofan GmbH has over the past few years undergone a fundamental restructuring. In order to dynamically meet the challenges of the global market, appropriate organizational improvements and rationalization steps have been initiated and to a large extent already realized. The result is a slimmed-down company with a flexible structure and flat hierarchies.

Teamgeist serienmäßig!

Über viele Jahre hat sich die Mannschaft der Schwabengarage AG in Leonberg zum wichtigen Partner rund um den Fuhrpark der Rofan GMBH entwickelt. Auch weiterhin wollen wir tatkräftig die Beziehung pflegen und sehen uns eher als Teammitglied, das für die Mobilität der Rofan-Mitarbeiterinnen und -Mitarbeiter verantwortlich ist.
